PEUGEOT
SERVICE
PROMISE

We believe our customers deserve the best, which is why we have the Peugeot Service Promise. It is our commitment to you to provide expertise, quality, reassurance and convenience. It demonstrates that we always strive to provide the best possible service experience. We promise:

- » To provide an expert level of care
- » To do our best to keep you on the road
- » To be open and transparent
- » To give you more.

For more information on the Peugeot Service Promise ask one of our Customer Advisers or visit peugeot.co.uk/servicepromise

POLLEN FILTERS

IF YOU COULD SEE HOW FILTHY
YOUR POLLEN FILTER GETS...
YOU'D GET IT CHANGED

What does a pollen filter do?

A pollen filter is designed to protect you from airborne particles (dust, pollen, fumes, bacteria, pollutants etc) which enter the vehicle's cabin space.

By eliminating most pollutant particles, it provides cleaner, healthier air for both driver and passengers. It also prevents deposits forming on the windscreen that can reduce the driver's visibility.

5 good reasons why your pollen filter may need changing

- » **Your Health:** fully functioning pollen filters reduce air pollutants that create fatigue, drowsiness, headaches, nausea and allergic reactions
- » **Protection:** the filter helps allergy and asthma sufferers by filtering out pollen
- » **Comfort:** they reduce unpleasant odours, especially those arising from heavy traffic
- » **Hygiene:** they help to reduce the build up of deposits in the heating, ventilation and air conditioning system
- » **Air Flow:** reduced flow of air through a blocked pollen filter will result in a less efficient operation of the system.

Peugeot Recommends

We recommend that your pollen filter is replaced at every scheduled service. But, if the air in your vehicle is stale or if your windscreen is taking too long to de-mist, it's probably a sign that the pollen filter is clogged up and needs changing now.

Our pollen filters stop pollen, dust, industrial pollen, spores and bacteria getting into the air you breathe. You can choose between three different types:

- » The Classic range captures all particles larger than 5 microns*
- » The Comfort range captures all particles larger than 2.5 microns*
- » The Comfort Premium range captures very fine particles smaller than 2.5 microns*.

The Comfort and Comfort Premium ranges have been designed for people with sensitivities for whom even the smallest of particles can cause a reaction.

We always recommend having your service carried out by an authorised Peugeot Dealer.

*a micron is one millionth of a metre
